

SaaS

Software as a Service

Retail Anywhere has designed a SaaS solution model delivering a combination of “on-demand” and “on-premise” software. Our “pay as you go” model has minimal upfront costs and delivers a complete solution with Retail Anywhere POS and Retail Anywhere Enterprise along with professional services, upgrades, maintenance and support.

On-Demand Cloud Computing

Retail Anywhere Enterprise is an on-demand application hosted on private clouds in a secure data center by Retail Anywhere. Cloud computing services include all required server hardware, software and bandwidth from the data center to the internet. Hosting services include server maintenance, upgrades and secure off-site data backup.

On-Premise

Retail Anywhere POS remains an on-premise application, installed on POS hardware. Real-time data replication between Retail Anywhere POS and Retail Anywhere Enterprise makes POS and store-level data available on-demand.

Ideal Solution

As a small to mid-size retailer with limited budgets and a limited IT staff, you now have the perfect solution. Rely on Retail Anywhere for a complete POS and retail management system with software, services, upgrades, maintenance and support—all with a minimal upfront cost and low monthly fees.

With a SaaS solution from Retail Anywhere, you can expect:

- Greater flexibility and scalability
- Lower operating costs
- Reduced strain on IT resources
- Minimal upfront costs
- Ease of deployment
- Increased application reliability
- Costs aligned with usage
- Rapid ROI
- Upgrades, maintenance and support
