Avoid the high cost and intensive labor needed to run an internally based exception reporting solution. Using Retail Anywhere's software tools, LP Innovations professionals can quickly identify problems and helpful ways to reduce shrink issues and increase your bottom line.

Put Our Experience To Work For You

Retail Anywhere and LP Innovations have partnered to provide an exception-based reporting solution suitable for retailers of all sizes. This solution provides retail clients with the ability to utilize an ASP-model exception reporting application along with expert analysis by today's leading loss-prevention outsource company.

The Retail Anywhere application provides common tools for loss prevention analysis in a web-hosted environment and reports against multiple point-of-sale (POS) transaction logs and systems. The application lets businesses review current and historical loss prevention data with powerful data mining grids and cubes. Additional standard reports are also available from MS Reporting Services and Crystal Reports to provide continuity.

LP Innovation's team of analysts, certified in utilizing the Retail Anywhere application, analyze data on a regular basis to identify exceptions at store, employee or transaction levels, to determine fraudulent activity associated with theft, compliance issues associated with inadequate training or procedures and operational issues.

The end result is turning data into action, providing retailers with timely and detailed information resulting in increases in productivity, performance, and profitability!
